

Google Translate API Key Generation Guide (Step-by-Step)

Step 1: Go to Google Cloud Console

Open: <https://console.cloud.google.com/>

Step 2: Create a New Project

- Click on the project dropdown (top bar)
- Click 'New Project'
- Enter project name
- Click 'Create'

Step 3: Enable Billing

- Go to Billing section
- Add your payment method (card required)
- Note: Free tier available but billing must be enabled

Step 4: Enable Translation API

- Go to 'APIs & Services' → 'Library'
- Search: Cloud Translation API
- Click it and press 'Enable'

Step 5: Create API Key

- Go to 'APIs & Services' → 'Credentials'
- Click 'Create Credentials'
- Select 'API Key'
- Copy your API Key

Step 6: Secure Your API Key (Important)

- Click 'Restrict Key'
- Add HTTP referrer (frontend) OR IP restriction (backend)
- Restrict API to 'Cloud Translation API' only
- Save changes

Step 7: Use API Key in Your Code

Example: `process.env.GOOGLE_API_KEY`

Step 8: Test API

Make a request using axios or curl to verify translation works

Important Notes:

- Google Translate API is NOT fully free
- You get limited free usage, then charges apply
- Always restrict your API key to avoid misuse
